PREFACE.

OPIUM.

HON'BLE SIR H. L. HARRISON, KT.

IT having been decided to issue a revised edition of the Opium Manual in four separate parts, the present volume (Part IV), which is intended for the use of officers in the Benares Agency only, contains tables of calculations relating to the duties of Opium officers as set forth in Parts II and III.

2 This volume is interleaved with blank pages to allow of the insertion of additions and alterations hereafter if necessary. Errors and omissions should be brought to the notice of the Board.

3. This volume may be cited briefly as "The Opium Manual, 1891 (Benares), Part IV."

BOARD OF REVENUE, L.P.,

TABLE No. 11.

TABLES FOR REDUCING 100 MAUNDS OF OPIUM AT VARIOUS CONSISTENCES TO 51°, 52·50,° 70 AND 90° CONSISTENCES.

NOTE.—The accepted assay of any given quantity of opium is the mean average assay of three separate samples, which are weighed to quarters of a degree. Therefore in calculating the mean average consistence, unless the total consistence of the three samples is divisible by three without a remainder, the decimal parts admitted into the tables must occur.

TABLE No. 17.

TABLE FOR ASCERTAINING THE EXCESS OPIUM USED WHEN CAKING ABOVE STANDARD LIMIT.

Explanation of the Table.

A maund=$82\frac{2}{7}$ lbs avoirdupois, as 1 lb avoirdupois contains 7,000 grains.

$82\frac{2}{7}$ lb=576,000 grains, and 1 maund is equal also to this, or 1 maund= 576,000 grains.

1 seer=14,400 grains.
1 chittack=900 grains.
1 kutcha=225 grains.

Now a provision opium cake contains inside 1*s*.-7*c*.-2*k*. of opium; this is therefore equal to 21,150 grains avoirdupois. Suppose this quantity has been caked at 1 grain above consistence, then in every 100 grains there was expended an additional 1 grain of solid dry opium; or the loss in

	100 grains=	1 grain.
	1,000 do. =	10 do.
	10,000 do. =	100 do.
and for the contents of one provision cake.	loss in 20,000 grains=	200 grains.
	1,000 do. =	10 do.
	100 do. =	1 do.
	50 do. =	0 5 do.

Total loss in 21,150 grains=211·5 grains, which have been used in excess for one grain above standard
∴ 21·15 grains will be the excess for ·1 grain above standard.
and 21·15 grains for ·01 grain above standard.

To find the excess quantity or loss in caking over the standard limit of consistence, set down the number of cakes made to the left and find the difference between the consistence at which they were caked and the standard limit.

Find the number of cakes in even thousands by looking at the first or left hand column of the tables and then look for the column of difference, and where the two meet take that number and set down to the right, then do the same for the hundreds, tens and units, and add all together; reduce to kutchas, chittacks,

seers and maunds by dividing by 225, 4, 16 and 40. Example 20,160 cakes were made at 70·90°, 70·50° being the standard limit;

$$\therefore 70{\cdot}9^\circ - 70{\cdot}5^\circ = {\cdot}4^\circ \text{ the excess, or loss in caking.}$$
